APPENDIX C	UNIT TABLES

I. General

The Town of Leicester has received public interest in establishing a water district along portions of Peoria Road, New Road, Covington Road, Coverdale Road, Cone Road, Bush Road, Dunkley Road, Leicester Road, Jones Bridge Road, Perry Road, and Gibsonville Road.

A water district is a special use district required by Town Law where a specific area of the Town receives a specific benefit. The cost of receiving this benefit is borne solely by the property owners in that specific area.

The purpose of this project is to provide a safe and reliable potable water supply and fire protection for property owners in the proposed West Town Water District.

II. Project Planning Area

A. Location

The proposed District will encompass portions of Peoria Road, New Road, Covington Road, Coverdale Road, Cone Road, Bush Road, Dunkley Road, Leicester Road, and Jones Bridge Road and will serve approximately 137 residential, commercial, and agricultural properties.

B. Environmental Resources Present

There are farmlands present in the project area. All construction will be taking place in existing road right-of-way or easements, and proper construction mitigation and restoration efforts will be implemented based on standard practices common to the industry.

There are Federally and State regulated wetlands, but they will not be impacted by the project as the water main will either be installed in the road right-of-way or directional drilled. In addition, several Class C streams will be crossed as part of the project either under a cross culvert or drilled.

There are no known endangered species in the project area, but the area does have the potential for Northern Long-eared bats. Tree removal, if any, will be limited between April and September.

Historical properties and cultural resources will be further evaluated during design when the precise location of the proposed main can be

identified. Construction will not proceed until SHPO is consulted and their approval is obtained.

C. Growth Areas and Population Trends

According to the United States Census, the Town of Leicester had a population of 2,200 in 2010 and 2,102 in 2023. This number reflects a population decrease of approximately 4.5%.

D. Community Engagement

The Town Board has discussed the possibility of extending water to the proposed areas at several public meetings over the past 5 years. In addition, the Town sent out a public survey form to the properties in the proposed district, receiving 166 individual responses.

- A total of 149 survey responses were obtained. However, 35 of those survey responses were not applicable for the following reasons:
 - 3 surveys were incomplete
 - 6 responses were from properties already connected to public water
 - 18 responses were duplicates, primarily due to multiple people from the same household filling out the survey
 - 1 respondent submitted a 2nd survey changing their mind from “no” to “yes”
 - 2 respondents are located on Route 20 east of the Hamlet of Cuylerville and will be able to connect to the transmission main installed under the Regional Water Project
 - 5 respondents are located east of River Road on Perry and Jones Bridge Roads in a very remote area of the Town
- Of the remaining 114 respondents:
 - 81% indicated “yes” they would be in favor of public water
 - 16% indicated “maybe”
 - 4% indicated “no”

There will be additional public meetings as the district formation proceeds.

III. Existing Facilities

A. Location Map

Figure 1 provides an overview of the existing and proposed water mains in the Town.

B. Existing Water Supply

The entire area of the proposed water district is presently served by private wells. The Town of Leicester has received several complaints about the quality and quantity of the water in the area. Residents in this area have experienced the following problems:

1. **Insufficient quantity** of water is available for residential wells. Residents must conserve water by alternating shower days, alternating laundry days, or not washing clothes in their residences at all.
2. **Poor water quality** is predominant in the existing well supplies. The water quality requires some residents to either boil water for consumption or purchase bottled water for cooking and consumption.
3. **High cost** to operate and maintain existing well supplies. Several residents must purchase chemicals for softening and treatment systems and must frequently replace their plumbing systems due to corrosion of their fixtures. Several residents currently pay over \$1,000 per year to operate and maintain their water system, which provides them with poor quality water and insufficient quantities at times.
4. **Fire Protection:** Currently, there is no water system to provide fire protection in the proposed water district.

C. Water Demands

The demands for the proposed service area are as follows:

Average Day	22,520 gpd
-------------	------------

The future demands for the proposed service area will utilize a 1% increase per year. This increase considers population projections and the land use of the area.

IV. Need for Project

A. Health and Safety

The proposed water main will provide safe potable water to the residents of the West Town Water District and will eliminate the public health risks associated with the quality and quantity of ground water in the area.

B. System O & M

A water distribution network will replace expensive individual water treatment units; this will reduce the operation and maintenance costs borne by the residents at this time. The Town of Leicester will contract with the LCWSA to provide retail service and operation and maintenance of the proposed service area.

C. Growth

While economic development is viewed as a project benefit, balancing economic development and land protection is necessary, critical, and has been considered for this project. Agriculture is important to the Town of Leicester, functioning as a part of the Town's economic base as well as being the foundation for the rural character that the Town wishes to maintain. The Town intends to limit future water service connections within the boundaries of Agricultural Districts to only agricultural structures or land and structures that have already been approved for development. Thus, there are no anticipated long-term impacts to the Agricultural Districts as a result of the proposed action including no change in use of agricultural/residential lands within any Agricultural Districts.

V. Alternatives Considered

A. Description

1. Alternative 1 – Null Alternative

Estimated Capital Cost: \$ 0

This alternative proposes to “do nothing”. The residents of the West Town Water District would continue using their existing well treatment systems, some whose annual costs can exceed \$1,500. Costs for the purchase of bottled water and off-site laundry services add an estimated \$500 to \$1,000 per year to the cost of a private well. This could mean escalating health problems and water shortages for the residents of the District.

2. Alternative 2 – New Water Distribution System

Estimated Capital Cost: \$6,971,000

Prior to defining the scope of the infrastructure that will be constructed by the Town, it is important to review the proposed infrastructure that will be installed by the LCWSA as part of the Regional Water Supply Project, depicted by the red line on Figure 1 at the end of this report. The proposed West Town Water District would not be feasible without the infrastructure that will be installed under the Regional Water Supply Project. This includes:

- Transmission main that will run from the east along Jones Bridge Road (east of the Village of Leicester), NYS Route 36, Perry Road, and Gibsonville Road. These mains are depicted in red on Figure 1 at the end of this report.
- A new water storage tank and pump station will be installed on Perry Road.
- In addition, the LCWSA will take over the operation and maintenance of existing water main along Crapsey Road and an existing water storage tank located at the western end of Crapsey Road.

The costs related to the LCWSA Regional Water Project are not included in the estimate for the proposed West Town Water District.

The infrastructure that will be installed by the Town as part of the West Town Water District includes:

- Base Project – Installation of 8-inch water main along portions of Peoria Road, New Road, Dunkley Road,

Leicester Road, and Jones Bridge Road. Highlighted in blue on Figure 1 at the end of this report.

- Area 2 – Installation of 8-inch water main along the western portion of Dunkley Road. Highlighted in orange on Figure 1 at the end of this report.
- Area 3 – Installation of 8-inch water main along portions of Bush Road, Cone Road, and Covington Road. Highlighted in green on Figure 1 at the end of this report.

Water services (long and short side) will be provided for all properties requiring a service, from the water main to the property line. This includes the properties along that transmission mains related to the LCWSA Regional Water Project.

B. Design Criteria

The proposed infrastructure will be designed to provide safe potable water and fire protection for the residents within the proposed service area, following the requirements of the New York State Department of Health.

C. Map

The proposed West Town Water District map is included in Appendix A. It should be noted that the map includes parcels along the Perry Road and Gibsonville Road transmissions that will be installed by the LCWSA as part of the Regional Water Supply Project.

D. Environmental Impacts

There are no anticipated negative environmental impacts associated with the project. However, an environmental review will be done for the project. All construction will be done in existing road Right-of-Ways or new permanent easements, and proper construction mitigation and restoration efforts will be implemented.

E. Advantages/Disadvantages

Although there are significant costs associated with Alternative 2, it is the most viable alternative as it is consistent with the goals and meets the needs of the Town of Leicester more effectively than the null alternative.

The advantages of Alternative 2 are as follows:

1. It will eliminate the ongoing health risks associated with the quality and quantity of ground water in the area.
2. Combined with other proposed water districts, it will be a step towards creating redundancy in the existing system, increasing the reliability of potable water supply and fire flow.

VI. Recommended Alternative

The recommended alternative is Alternative 2 - New Water Distribution System.

A. Project Design

1. Water Supply

The proposed water district will be provided with water through an agreement with the LCWSA.

2. Treatment

The City of Rochester Water Treatment Plant located on Hemlock Lake will provide treated water to the proposed District. The treated water will meet all the state and federal drinking water standards.

3. Storage

Primary storage for the proposed District will be provided through a new water storage tank to be constructed as part of the LCWSA Regional Water Supply Project, to be located Perry Road.

Additional storage for the upper hydraulic grade will be provided by an existing water storage tank located on Crapsey Road, which is currently owned by New York State and serves Letchworth State Park. The tank will become part of the LCWSA Regional Water Supply Project, allowing it to serve areas outside of Letchworth State Park, including the proposed West Town Water District.

4. Pumping Stations

A new pump station will be installed as part of the LCWSA Regional Water Supply Project on Perry Road to convey water from the Perry Road tank hydraulic grade to the Crapsey Road tank hydraulic grade.

5. Water Services

The portion of the water service from the right-of-way to the water main will be the responsibility of the district, including meter pits and water meters. The portion from the right-of-way to the home will be the responsibility of the homeowner.

B. Proposed Water District Unit Costs

The residents of the proposed District will assume the cost for the project. The estimated project unit costs are based on financing through USDA Rural Development at a 3.75% interest rate for a 38-year term.

The estimated average annual water cost was estimated based on a retail rate of \$5.05 per 1,000 gallons from the LCWSA and an average usage of 60,000 gallons/unit/year, along with a base charge of \$51 per quarter.

1. The estimated costs for the proposed project are detailed in Appendix B and summarized as follows:

Total Estimated Capital Cost	\$6,971,000
Estimated Grant	\$4,879,700
Net Project Costs	\$2,091,300
Annual Debt Service (38 years, 3.75%)	\$104,129
Estimated Debt Service/Unit (150.2 units)	\$639.27
Estimated Yearly Water Cost	\$507.00
Total Estimated Unit Cost	\$1,200.27

2. Equivalent Dwelling Units

Unit definition

- Any facility will be considered as a minimum of one (1) unit.

- Each single-family residential dwelling shall be considered to be one (1) unit. Included in this category will be single family houses and mobile homes.
- Multiple single-family dwellings on the same parcel of land or apartments. One (1) unit will be charged for the first family dwelling, with an additional one-half (0.5) unit for each additional dwelling.
 - This assumes a single water service and water meter.
- Vacant developable land not within the certified agricultural district will be assessed one-half (0.5) of a unit.
- Vacant undevelopable land not within the certified agricultural district will be assessed one-tenth (0.1) of a unit.
- Non-residential, commercial, and industrial facilities will be assigned an equivalent number of units based on usage.

3. Other One Time Costs

LCWSA Application Fee	\$250
Service Line (age)	\$30/LF (\$3,000 Average)
Well Separation/ Plumbing Modifications	\$500

VII. Miscellaneous Information

A. Options for property owner's well

1. Abandon the well.
2. Keep well but separate it from public water plumbing.
3. Keep well and install backflow prevention.

B. Service Line Information

1. A service line will be installed to all residences, from the water main to the road Right-of-Way, for connection to the public water system.

C. Optional Water District Enhancements with Remaining Funds

1. Upsize water main diameters to allow for future growth of the water system and maintain above average fire flows.
2. Extend water mains to the District Boundaries and through road intersections.
3. Reimburse the costs of any fees for the residents of the Water District.

D. Project Schedule

The overall project schedule has many variables including the timing of the LCWSA Regional Water Supply Project and funding awards for the West Town Water District.

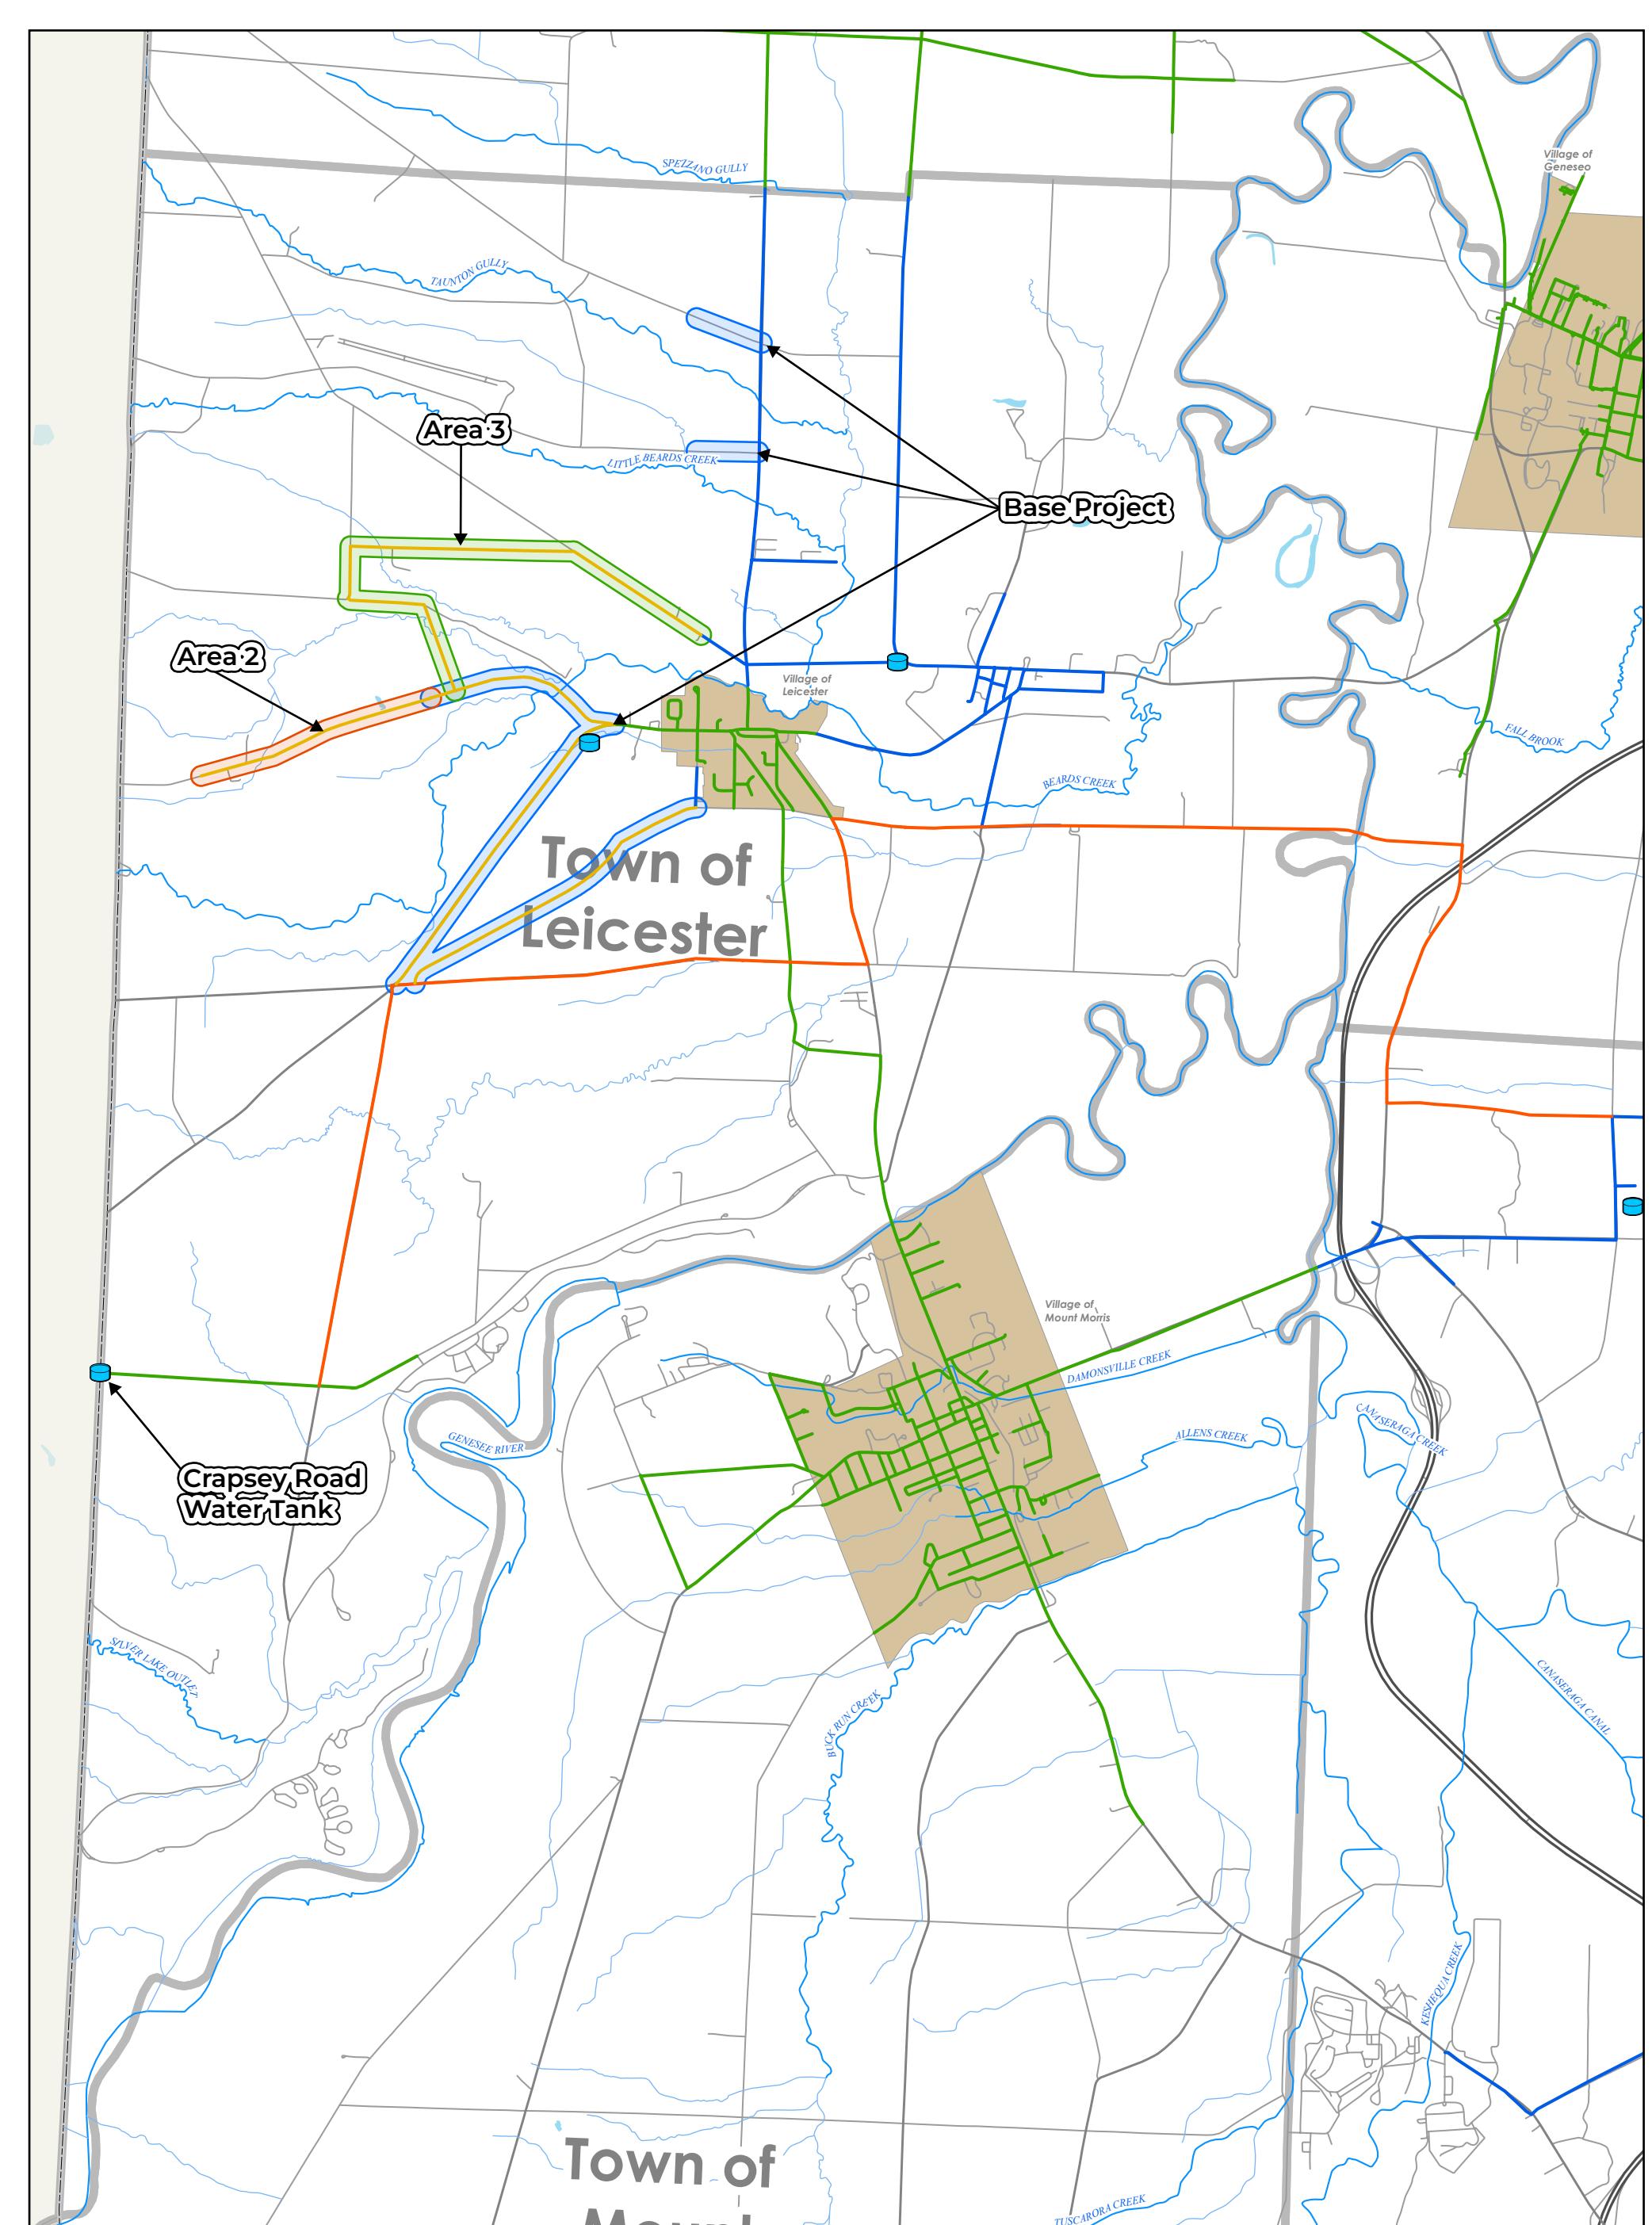

It is anticipated that the infrastructure related to the LCWSA Regional Water Supply Project will be installed prior to the completion of the infrastructure related to the West Town Water District. This would result in water becoming available to the properties along the Perry Road and Gibsonville transmission mains, prior to the other roadways within the District.

Under this scenario the District would fund the water services along Perry Road and Gibsonville Road first, utilizing a local loan. Annual debt would then be charged to those property owners along Perry Road and Gibsonville Road, while all other properties in the District would not be charged, as they would not have water available. Once the infrastructure related to the District is installed, all properties in the District will be charged the annual debt service.

VIII. Conclusions

The Town of Leicester is committed to providing safe and reliable potable water supply and fire protection for its residents. This specific project will be instrumental in achieving that goal. It is recommended that the Town of Leicester seek funding for the completion of the project.
